## Deduct Meter Request

Date:
Name:
Service Address:

**Cost of meter depends on inventory**

Paid: \_\_\_\_\_

### INSTALLATION REQUIREMENTS FOR DEDUCT METERS

1. Deduct meter must be plumbed downstream (after) the main meter and connected **only** to the outside faucets. There should be at least one valve on the inlet side of the meter so it can be removed for repairs if necessary.
2. Deduct meter must be installed so it can be read using the VXU reader. To do this, a wire must be installed from the deduct meter to the MXU box located next to the City owned water meter. This wire will be furnished by the City at no extra cost.
3. After meter and wire are installed, call the City of Tomah Water Dept. to make the final hook up to the MXU and to get the meter programmed so that it can be read. The Water Dept. will inspect the hook up at this time.

I have read the Installation Requirements for Deduct Meters and understand that if the installation instructions are not followed, I will not be allowed sewer credit for my deduct meter.
